

## Container Ramp Extension to suit Reefer Refrigerated Container

### STANDARD FEATURES:

- Electric scissor lift table suitable for loads up to 4000 Kg
- Heavy duty design includes 24v hand control, 3 phase power supply, 415v and 50Hz
- Heavy duty cylinders with drainage system and check valve to stop the lift table lowering in case of the hose bursting
- Removable lifting eye to facilitate handling and lift table installation including safety clearance to prevent trapping

Need to load or unload a reefer refrigerated container using a forklift then you need one of these and a NS-CRN65 container ramp.

If you plan on unloading a reefer shipping container (or refrigerated container) then you will need to purchase this as well as a NS-CRN65 container ramp.

This extension attaches onto the reefer refrigerated container and then the NS-CRN65 container ramp lips sits on the raised end of this extension. Make sure you use the safety chains (provided) to attach the extension to the reefer refrigerated container and the safety chains to attach the container ramp to the container ramp extension.

This also makes it easier to load and unload then end pallets in the reefer refrigerated container as the forklift will be more level making it really easy!
